

## Disability Dynamic Working with Clients

### Disability Dynamic

#### Working with clients

This module has been designed to introduce learners to working with clients who have a lifelong disability, and their families. The Working with client's module will provide the necessary theoretical underpinning to approach the client case studies that are available later in the programme.

#### Target Participants

Disability Dynamic supports allied health staff, students and disability professionals to learn about disability and services available within the disability sector.

#### Activity information

Disability Dynamic follows the real-life stories of people living with disability at different stages of their life. The stories detail the experiences and perspectives of the people as they partner with services and work towards their goals and aspirations. The stories include people living with cerebral palsy, autism spectrum disorder and intellectual disability.

Disability Dynamic aims to advance skills, knowledge and attitudes of staff particularly in the areas of person and family centred practice, evidence based practice and supporting individual goals. Disability Dynamic assists staff, in a range of roles, to develop positive, effective partnerships with people who have a disability and their families.

#### Assessment

This course includes formal assessment activities.

#### Prerequisites or pre-reading

There are no prerequisites for this course.

**Cost:** \$825.00 full course

\$440.00 per individual package

**Please note there will be a delay of up to 1 business day between course registration and receiving course access.**
